The Pond
Discovery Journal

Supported by The Dr. Mortimer and Theresa Sackler Foundation

Name

Date of Visit
Welcome, Park Explorer!

This journal is your guide to exploring the Pond as a designer, a gardener, and a naturalist. By completing the challenges on these pages, you'll discover how designers, gardeners, and naturalists are also stewards, or caretakers, of this special place. With millions of visitors each year, it takes a lot of hard work to keep Central Park’s landscapes healthy and beautiful.

The Central Park Conservancy is the official steward of Central Park. But we need your help, too! As you explore the Pond, follow the Park Explorer’s Code of Conduct:

- **Stay on the path.**
  Walking off of pathways can damage plants and disturb animals.

- **Take pictures, not souvenirs.**
  If every visitor took home a flower or leaf, there wouldn’t be any left in the Park.

- **Put trash in its place.**
  Litter pollutes the Park and can be harmful to animals.

- **Keep wildlife wild.**
  Human food is for human beings, not animals.

Add one more guideline for Park Explorers to follow, so they can be stewards, too!

---

**Discover!**

As you explore the Pond, pay close attention to the differences between the water, the shoreline, and the surrounding landscape.

**In/on the water, I notice...**

**Along the shoreline, I notice...**

**In the surrounding landscape I notice...**
One Pond, Two Views

Before Central Park was built, much of this area was swampland fed by De Voor’s Mill Stream. After studying the shape of the existing land, Park designers created the Pond. They designed the shape of the water body and chose the location of trees and shoreline plants. Designers carefully planned the landscape to create dramatic views from the shore, and designed paths for visitors to explore these views without harming the landscape.

Who Keeps the Pond Healthy?

Gardeners work hard to keep the Pond healthy for the plants and animals that live there. Here are just some of the things a gardener may do during the day:

Some shoreline plants are adapted for living on dry land, just at the edge of the water. Other shoreline plants are adapted to growing right in the water! All shoreline plants have deep roots that hold the soil in place. Gardeners arrange these plants close together to prevent the soil from washing away.

**ONGOING POND PROJECTS**

- Add plants that protect the shoreline and provide habitat for animals.
- Add fences to help protect sensitive plantings and wildlife.
- Cut back old plants to allow new plants to grow.
- Remove litter to keep the water clear.
- Lower the level of the water before it rains to prevent the Pond from flooding.
- Test the water to make sure it is healthy for wildlife.
- Teach visitors about the Pond and its history.

**THE POND SHORELINE STUDY**

I notice that shoreline plants living in the water...

I notice that shoreline plants living along the edge...

Duckweed is a tiny floating plant that provides food for ducks, turtles, and fish!
Not Just for People!

Urban naturalists study the plants and animals living in cities. The Pond is a habitat for many animals that live in New York City for some or all of the year, providing them with food, shelter, space, and water. Naturalists teach others about the importance of places like the Pond by recording and sharing what they observe.

Discover!

Complete the Animal Survey by recording the number and type of animals you observe.

Central Park is MY Park!
You are one of millions of people who visit Central Park every year! With so many visitors, it takes a lot of hard work to keep Central Park’s landscapes healthy and beautiful. The Central Park Conservancy is the official steward, or caretaker, of Central Park. By following the Park Explorer’s Code of Conduct, you are a Central Park steward, too! Sharing why Central Park is important to you and teaching others about your discoveries is another way to be a steward.

This is...

I’m sharing this because...

Being an urban park steward is important because...

Healthy Cities Need Healthy Parks!
The Pond is one of many special places in Central Park where people can enjoy and explore the outdoors. Since urban parks provide so many benefits to people, people need to be stewards of urban parks – including Central Park!
Discover Central Park!

The Central Park Conservancy offers a variety of Discovery Programs to help children explore Central Park and develop skills for inquiry, all in the world's greatest outdoor classroom.
